PFAS Conformity Declaration

Declaration of Conformity to per- and polyfluoroalkyl substances (PFAS)

PFAS is an abbreviation for per- and polyfluoroalkyl substances, which are often used in industrial processes due to their water, grease and dirt-repellent properties. The substance group comprises more than 10,000 different substances. PFAS do not occur naturally and have only been produced since the late 1940s. Chemically speaking, the organic compounds consist of carbon chains of various lengths in which the hydrogen atoms are completely (perfluorinated) or partially (polyfluorinated) replaced by fluorine atoms. Perfluorinated carbonic and sulfonic acids and their precursor compounds are used most frequently. Precursor compounds are substances that can be degraded to these persistent perfluorinated substances.

We hereby confirm that the following PFAS chemicals are not used in the manufacture of, or incorporated into, any product we manufacture or sell:

- Perfluorooctanoic acid (PFOA)
- Perfluorooctane sulfonate (PFOS)

Thorsis Technologies is committed to provide safe and high quality products to our customers. This information is provided to the best of our knowledge and belief and is based on our supplier information. The assurance of conformity is part of our supplier qualification.

With best regards

Thorsis Technologies GmbH
